

PLEBNET.DEV

BUILD THE FUTURE

Welcome

Agenda 21 Jan 2024

- LNBits Overview
- Architecture
- Swagger API + Extensions
- Resources + Examples
- Questions?

CAVEAT

Keep in mind these slides are only a brief overview,
these are only a few viewpoints.

Development moves fast, slides created in Jan 2024

Background

- 2017 – BTCPay Server
- 2020 – LNBits
 - originally started by software hobbyist benarc
 - golang (fiatjaf) and python versions
- 2022
 - golang version obsoleted, feature growth, wiki
 - Python development dominates here and elsewhere.
- 2023
 - only FastAPI Python + VueJS Maintained
 - full time devs on project today

2024 LNBits

- Current State
 - Evolving into more mature software,
 - with experienced code reviews, rapid release cycle
 - Large Extensions library and active Wiki
 - NIX Integration – 1 click install bitcoind, cln/lnd, etc.
 - LN node mgmt integration
 - Username/Password Authentication
- Future – Why you should pay attention:
 - LNBits could obsolete Umbrel, RTL, Thunderhub and BTCPayServer as a single All-In-One solution

BTCPay Architecture

Pros

- Very solid performance and stable.
- Well documented with many integrations
- Used in industry widely
- Existing hosts will run it for you, e.g. lunanode and voltage.

Cons

- Must use Docker, many containers.
- Requires .NET, C#, Vuejs, NBXplorer, bitcoind, run as full node or pruned, plus L2
- Time consuming to setup env for development – 30min – 1 hr
- VPS Cost if pruned node ~10-\$20/month up

LNBits, Layer 2 1/2

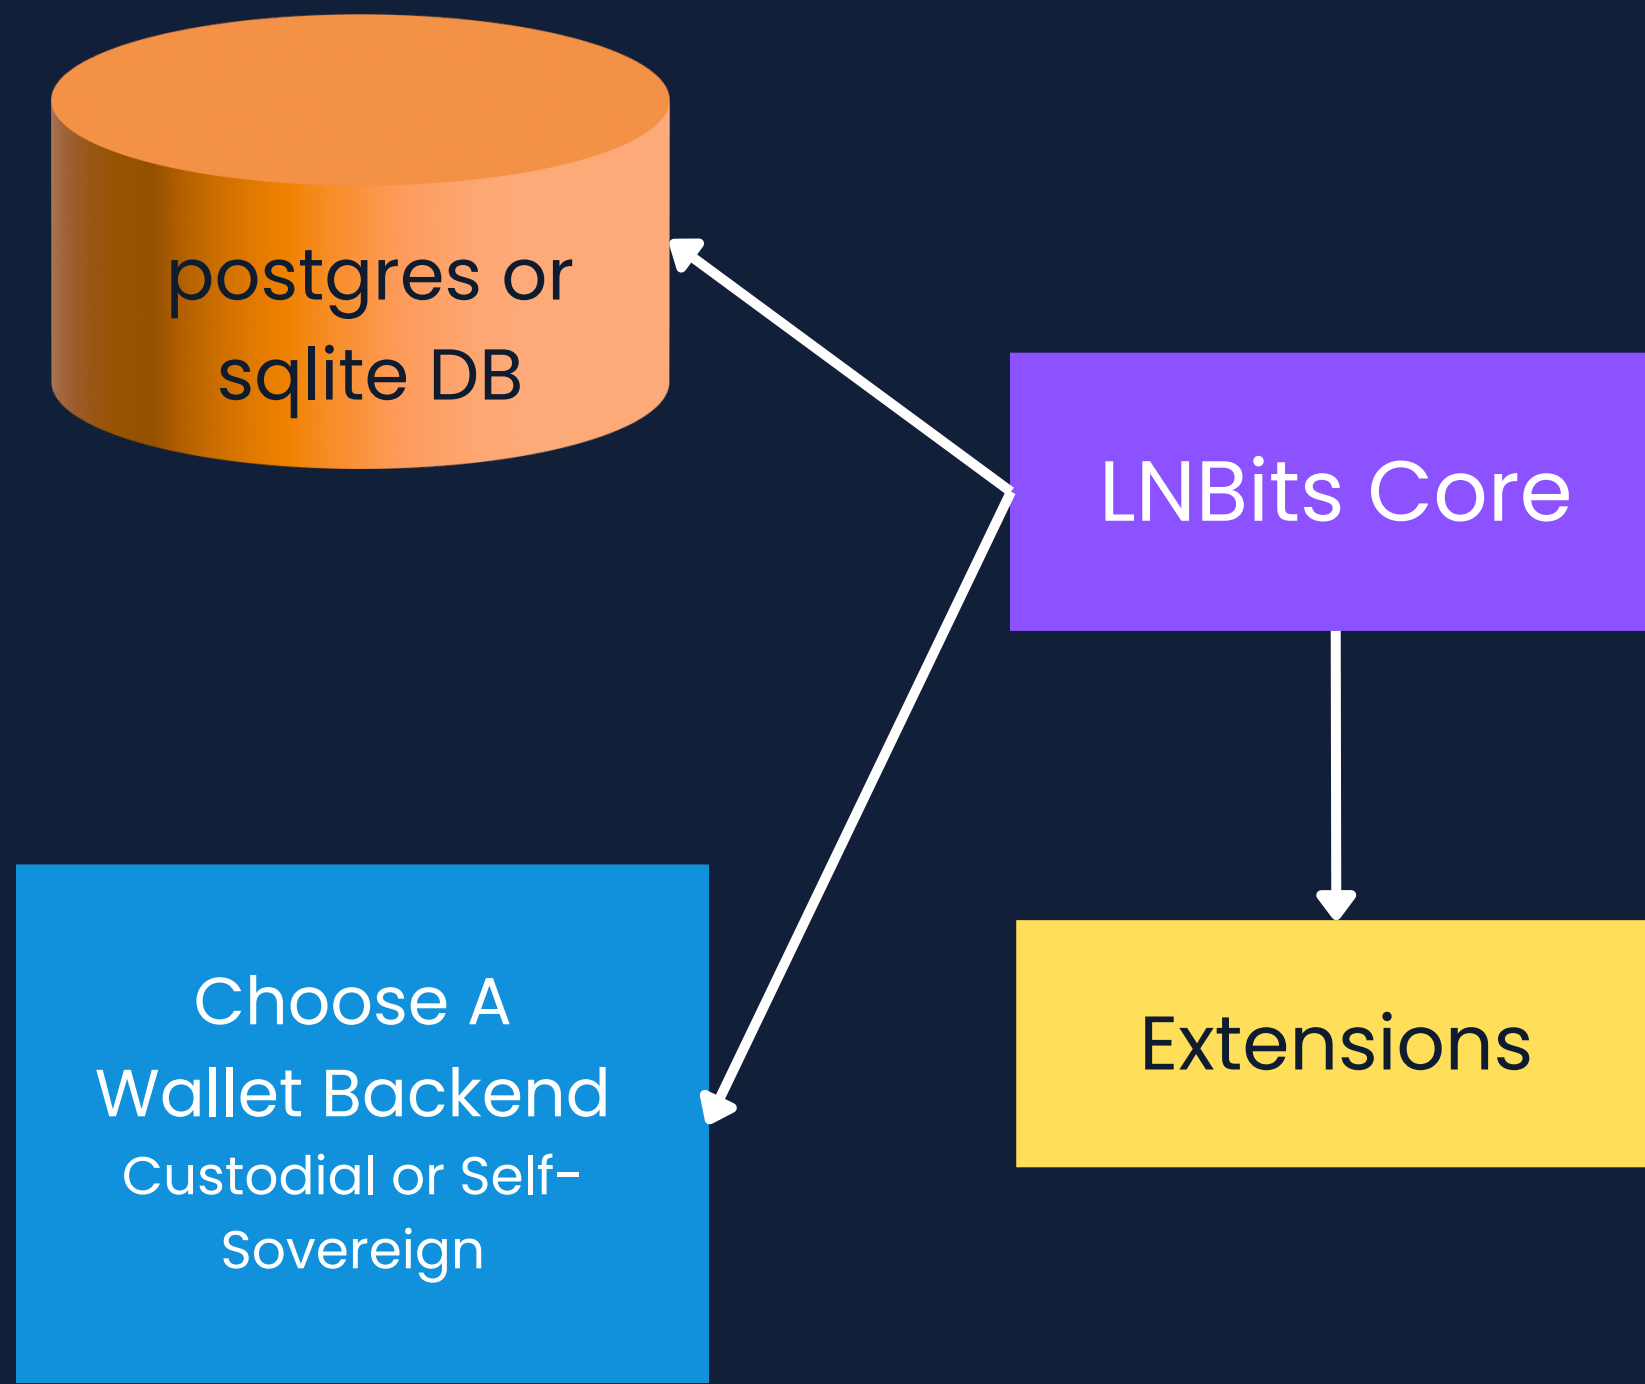

What is LNBits? It's multiple things:

- First – Infrastructure Software for App Developers
- Second – LNBits is also Accounting Software for Layer 2.
 - The wallets are not real wallets, it is for keep tracking of each user for a specific application or for an Uncle Jim model.

Tools for developers are included

- Swagger API
- Extension Building overview

LNBits Architecture

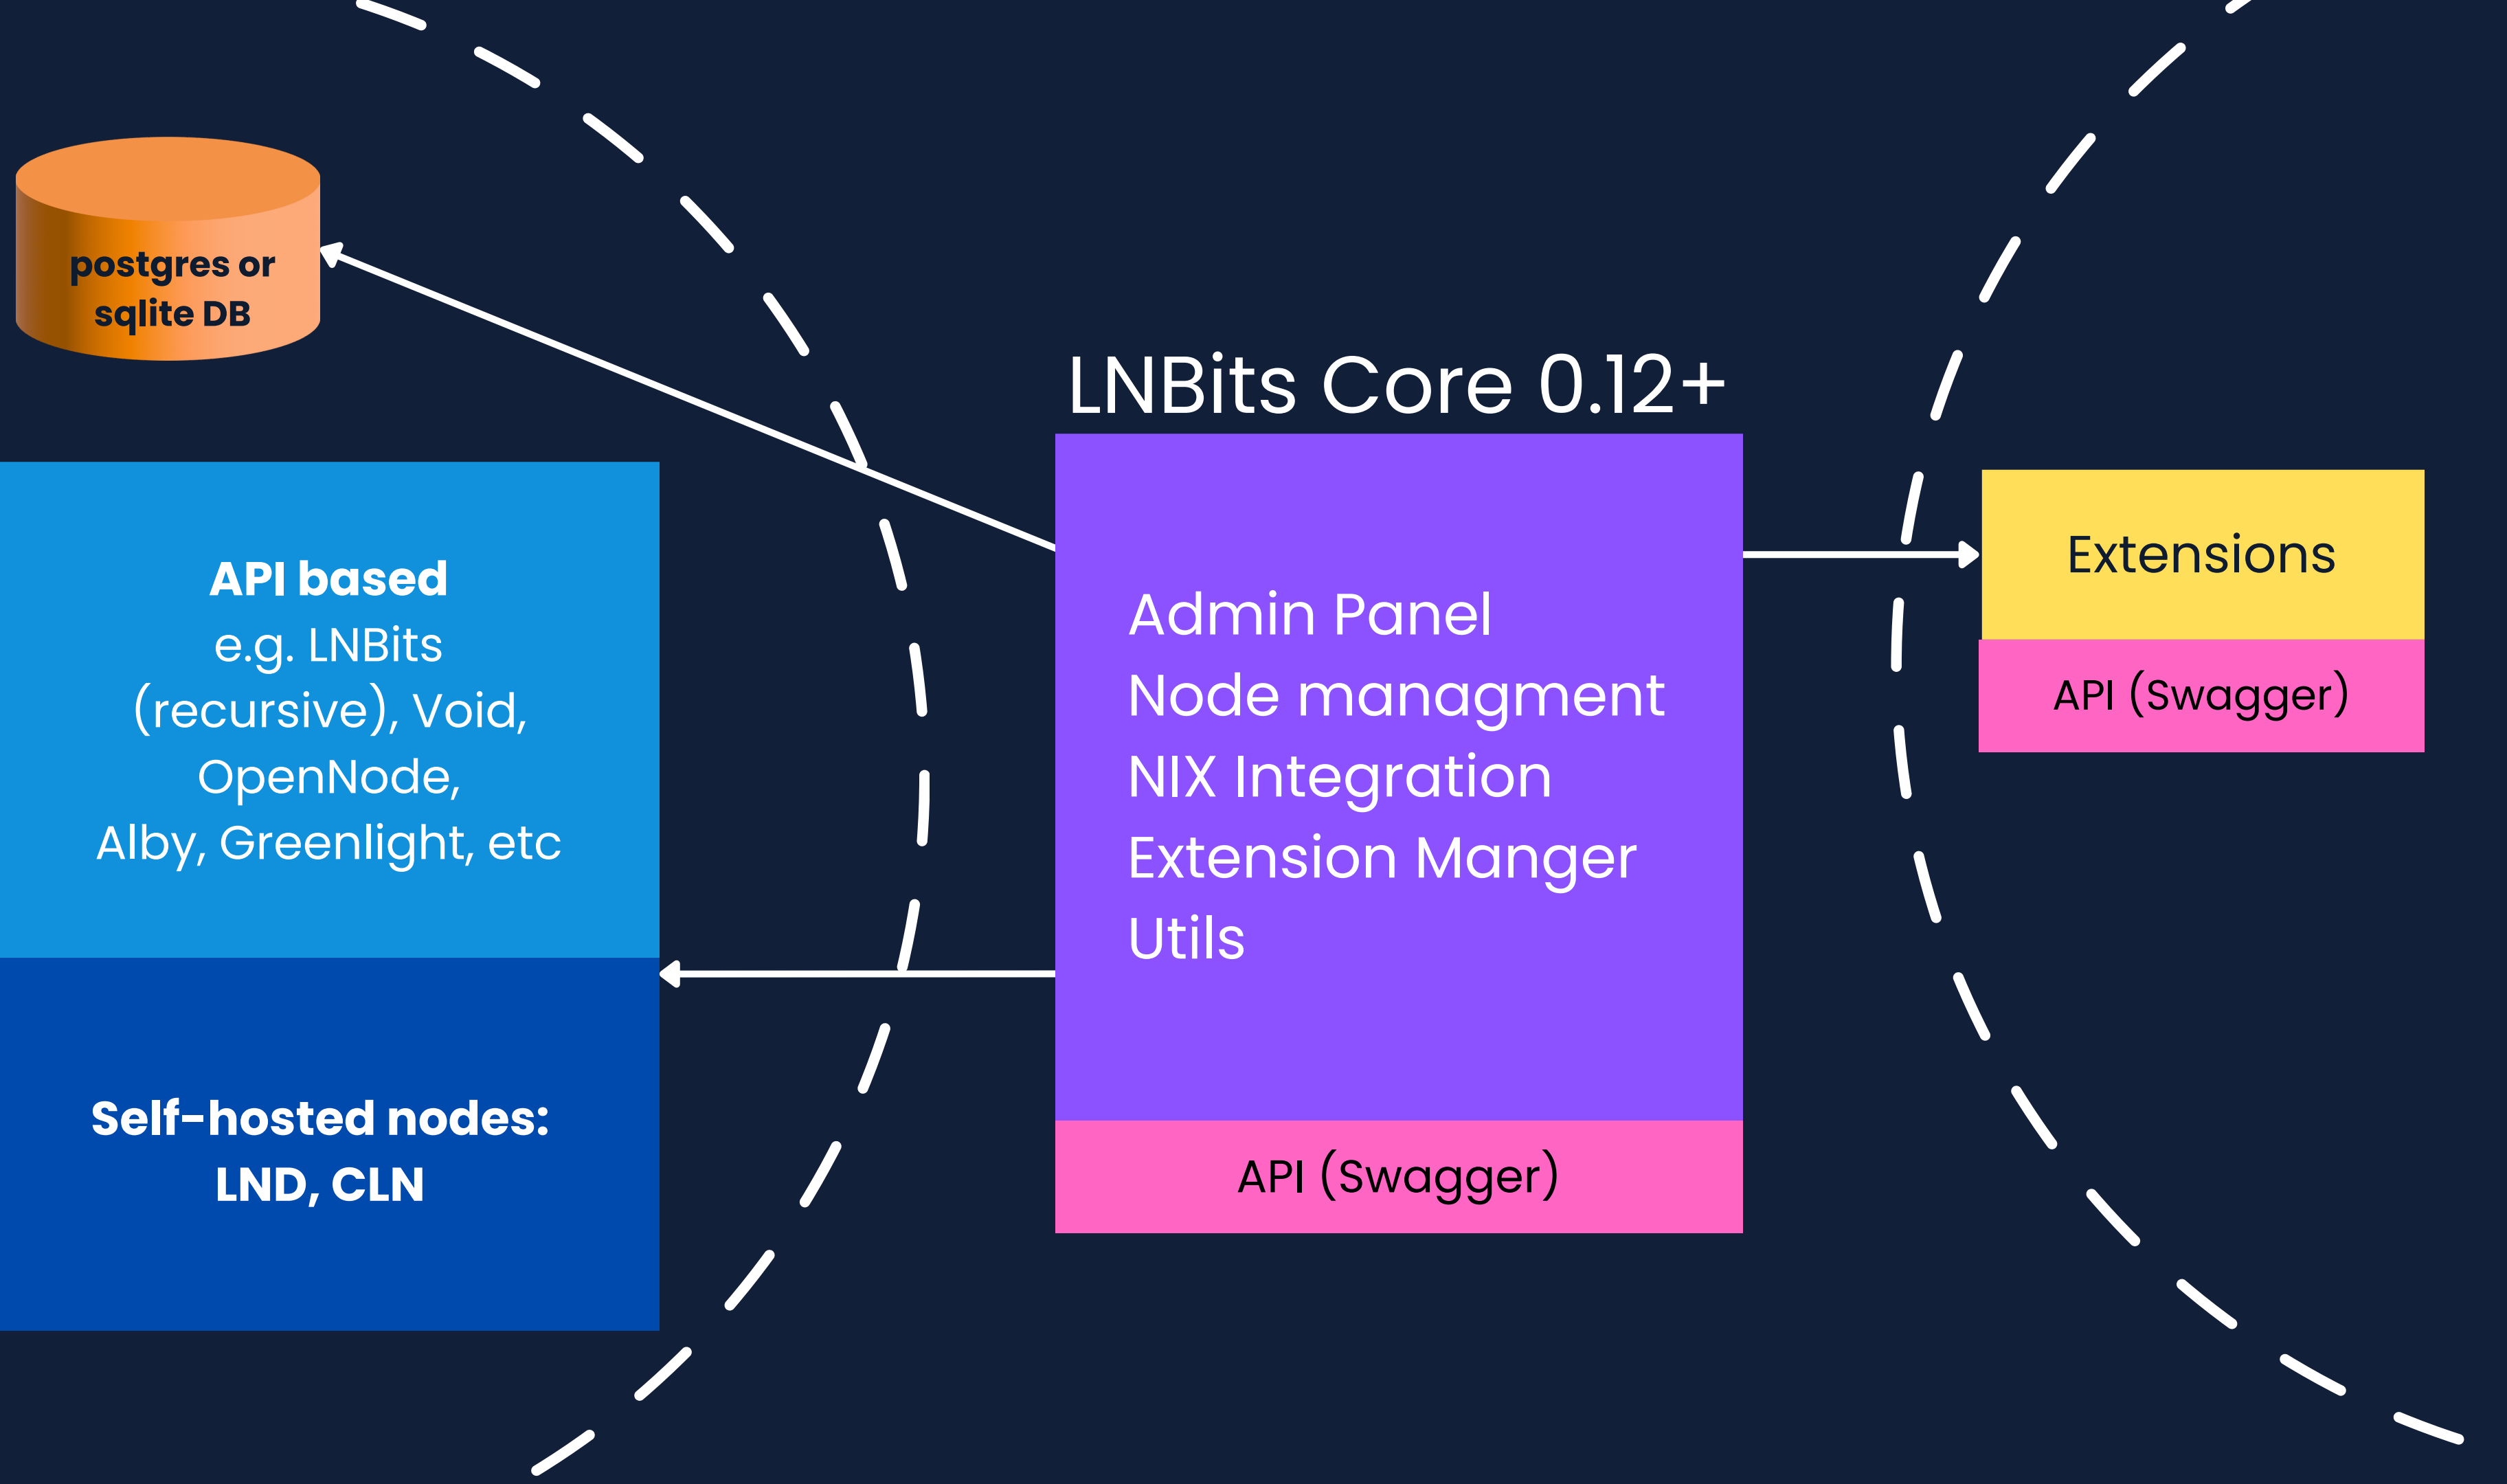

Pros

- MODULAR, Simple Architecture.
- Fast dev env setup, <5 min uptime
- Multiple choices for DB and Wallet, Void Wallet for testing.
- Python, Vue JS +Quasar
- Docker not required. Inexpensive.

Cons

- Still young software, continuously evolving. In beta stage, so error potential is higher.
- Primary focus is on L2 not L1
- L1 is supported in some extensions

Some Gotchas

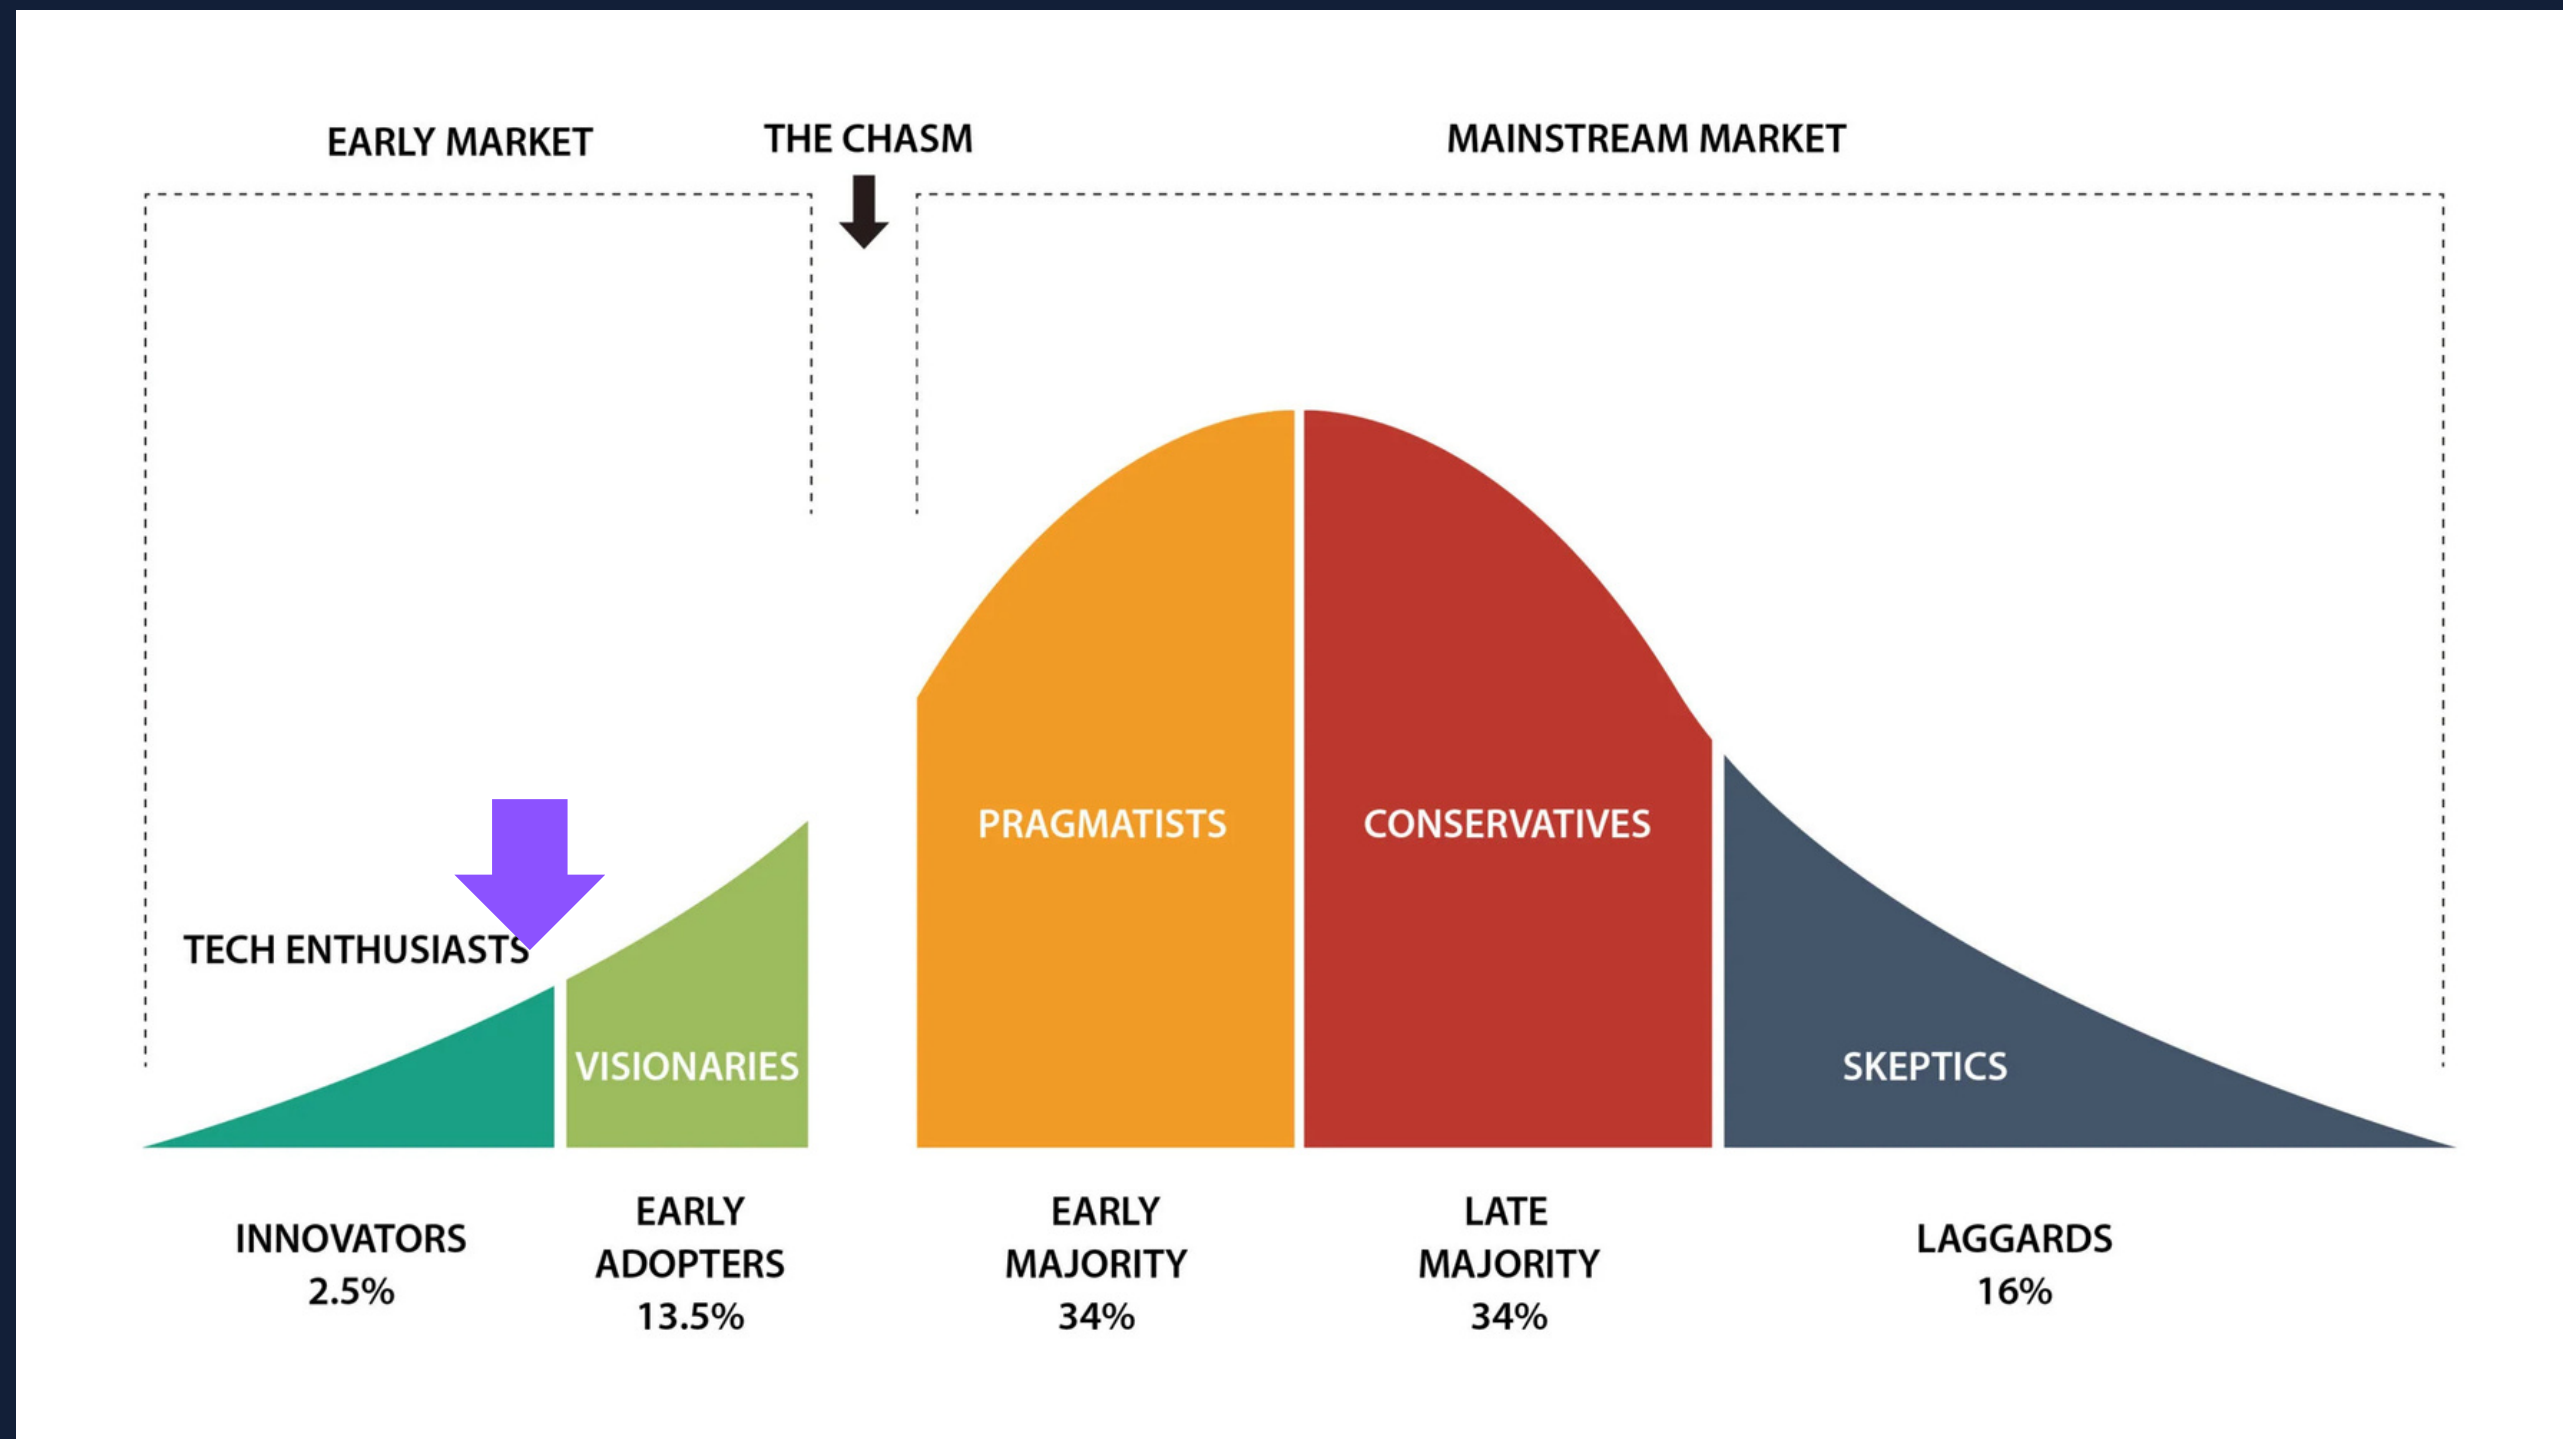

What are some?

- **API Key misuse common:** invoice vs admin key
- Manifest system for Extensions – can be confusing
- sqlite vs postgresql – know why.
- some features are so new; no documentation at all.
- Bugs will appear, if serious file an issue asap.
- Vetted vs Unvetted Extensions

Some Tips for Beginners

- Try to Run LNBits and use the API
- With Python
 - master async and aiohttp
 - PEP8 also see this clip
 - Poetry.
- Learn the difference between BOLT11, LNURL, lightning addresses and zaps – see October Talk
- Lots of future industry opportunities – Wordpress analog

Some Industry Thoughts

Demos

What is this?

- Swagger API – Micro apps and demos
 - satspaysession,
 - simple-registration-form
- Extension Building –
 - Example Extension Repo
 - Manifest system

Registration Form

This is a sample Registration Form
via LNBits.

Submission success.
Please pay Lightning Invoice below

Pay with  LNbits

Resources

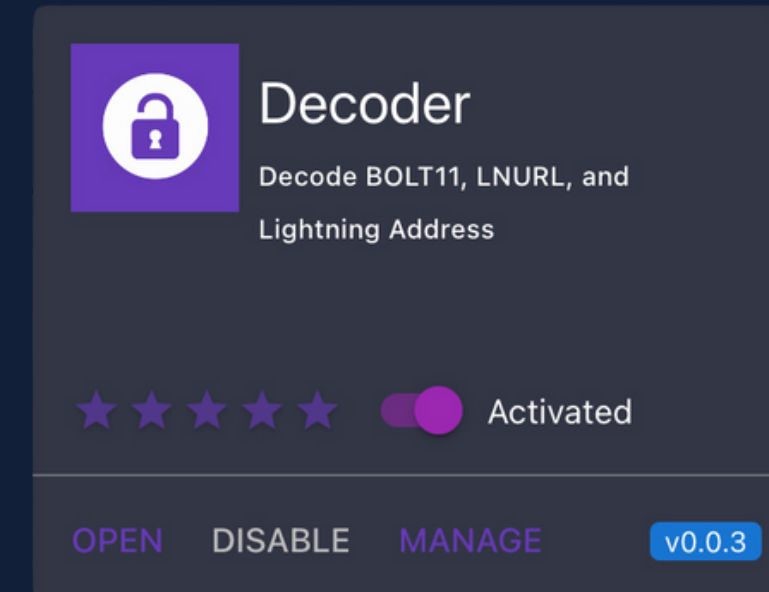

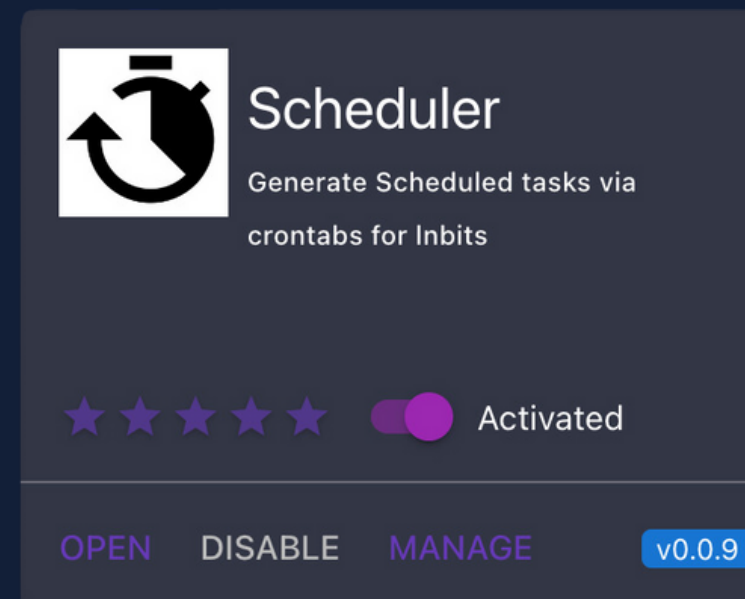

What are they?

- Testnet LNBits
 - <https://testnet.plebnet.dev> – Please use this!
- Testnet lightning faucet
 - <https://htlc.me>
- LNBits Telegram – ask for help here first
 - <https://t.me/lnbits>
- LNBits specialist help
 - Book a session at cal.com/bitkarrot

Selected Contributions

from Bitkarrot

- Lightning Address Ext. – Now integrated in LNURLp ext.
- Scheduler Extension
- Decoder extension
- pyLNbits SDK
- getAlby_integration
- plenty others, just ask

This is a Fact, Not a Postulation!

Michael Tidwell  @miketwenty1 · 8h

I'm starting to be convinced that you have very little chance of understanding a technology if you don't build something using it.

Build something using the technology that gives you purpose. Don't be a hodling couch potato.

Questions?

2024 Focus

Where I will be focused this season

- Heads Down building and Code Review
- Last workshop until ...TBD
- Seeking collaboration with active builders, testers, documenters
